

## OpenSeadragon Viewer - OpenJpeg not supported in Solaris

- **Product:** Rosetta
  - **Product Version:** 5.3 and above
  - **OS:** Solaris/SunOS
- 

### Symptom

IIIF OpenSeadragon viewer is not able to display JP2 images.

### Description

OpenJPEG is an open-source JP2 codec. It is only supported for Linux.

### Resolution

If you wish to replace OpenJpeg with a different tool (e.g. Kakadu), please contact the Support via Salesforce.
