

## New SSL certificate Alma February 2018 release

- **Product:** Alma
  - **Product Version:** Feb 2018 release
- 

### Question

In the February release there is a paragraph about the new SSL certificate vendor that will change in April, and that customer has to confirm that all systems that connect to Alma have the specified intermediate and root certificates installed. Will this include SAML, Stunnel, and all of our other defined integrations?

### Answer

The SSL certificate change will not affect the SAML authentication, since a different certificate is used for signing SAML messages than the one used to provide SSL to Alma. Also the Stunnel is not affected. In short: the process should not have any noticeable effect on customer's side and would not require any additional action.
