
How to check Rosetta System Checks?

- **Product:** Rosetta
 - **Product Version:** 5+
 - **Relevant for Installation Type:** Local
-

Question

Where do I go to check the system for startup errors?

Answer

System checks are used to check essential components needed for running Rosetta properly.

They are executed every time Rosetta is restarted (e.g. manually or via a startup script).

Each system check documented in Chapter 4 [Working with the Rosetta System] of the Rosetta System Administration Guide has a relevant plugin.

These and all plugins are configured in the Administrative module under Home > Plug-In Management > Bundled Tab >

Plug-In Type Name: StartUpCheckPlugin

StartUp-DBChecker DBChecker

StartUp-DeliveryWSChecker DeliveryWSChecker

StartUp-DepositWSChecker DepositWSChecker

StartUp-InvalidObjectChecker InvalidObjectChecker

StartUp-PDSChecker PDSCheckPlugin

StartUp-PermanentWSChecker PermanentWSChecker

StartUp-PluginsChecker PluginsCheckerPlugin

StartUp-RepositoryWSChecker RepositoryWSChecker

StartUp-SafeModeChecker SafeModeChecker

StartUp-SharedFoldersAccessChecker SharedFoldersAccessChecker

StartUp-SharedFoldersSpaceChecker SharedFoldersSpaceChecker

StartUp-StorageAccessChecker StorageAccessChecker

StartUp-StorageSpaceChecker StorageSpaceChecker

To check the Startup Checks Job:

1. Connect to Rosetta Administrative Module
2. Go to: Home > General > System Checks
3. Note if there are errors and what they indicate
4. If there are no errors when you check, click "Run" to do an ad hoc check
5. Open a CRM case to Rosetta Support if there is an error message you cannot resolve or don't understand to ask for

assistance in troubleshooting

6. To receive email alerts for Startup Checks Job:

a. Connect to the Administrative module

b. Go to Home > Scheduled Jobs Management > Startup Checks Job > Update

c. For "Send email?" change to "Yes" or "On failure only" and enter an individual or group email address (e.g. "libraryIT@library.edu")

d. Click "Apply" to receive alerts
