

Alma Publishing files lack .xml extension when untarred

- **Product:** Alma
 - **Product Version:** All versions
-

Description

File created by Publishing Profile from Items set doesn't have XML extension, although the file is in XML.

Resolution

When Use Default file name = Yes, and the File name Prefix is defined, then system will add the date, the process ID and the XML extension to the prefix.

When Use Default file name = No and a File name is defined, the output will have the name you define.

For dynamic file names, enter the file name variables as indicated below.

<name of your choice>_{JOB_ID}_{TIMESTAMP} -- This will create an output with ".xml" extension.
