

Analytics report with null values

- **Product:** Alma

Expected Behavior:

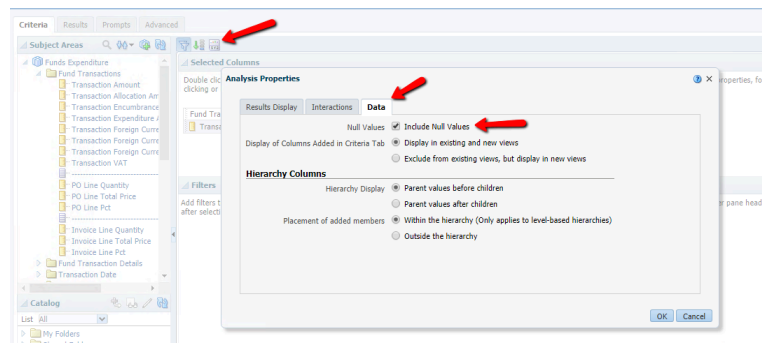

In the Analytics subject area "Physical items" it is not possible to create reports listing BIB records without items.

Accordingly, in the subject area "Fulfillment" it is not possible to create reports listing items without loans.

And in the subject area "Funds expenditure" it is not possible to create reports listing funds without transactions.

Note:

In some instances the subject area will display information if the Analysis Properties are set to include null values

However, filters need to be used to narrow down the search criteria in order for the report to populate due to various line and cell limits within Oracle
