

01 Linux for Librarians

Duration: 69 min

Description	<p><i>First session in Voyager Administrative Topics series. Recorded April 13, 2018.</i></p> <p>Covers what PuTTY is and how to configure this telnet client, common Unix commands, and basic Voyager checks for your environment.</p>
Target Audience	System Administrators, and any library staff responsible for performing tasks on the server.
Prerequisites	Familiarity with Windows, installing and configuring software
Session Q&A submissions	<ul style="list-style-type: none"> • Is the "S" really uppercase when using ls flag for sort by size? • Which batch jobs should be set up in crontab? • When you talk about regularly restarting Voyager, is just restarting Voyager, Apache and Oracle sufficient, or is a system reboot (therefore changing uptime) still important? <ul style="list-style-type: none"> ◦ See What tasks are required to maintain the Voyager server? and note recommendations under "Reboots" section. Daily application restart and weekly server reboot are recommended.
