

campusM Release Cycle – Native App Deployments

- **Product:** campusM
- **Operating system:** iOS, Android.

Environment	Production Release Candidate	Preview	Sandbox
Description	The Release Candidate is the currently available production release of campusM app and, aligned with your Production Environment. This can be deployed to the App and Play stores as your Production App on your request.	<p>The Preview App allows you to preview the release of your App due in the following month, as per Release Schedule and runs within the Preview Environment. The campusM Preview Environment is a clone of the Production Environment. A snapshot of your Production Environment is taken just before the release date and migrated to the Preview Environment.</p> <p>Each month the Preview Environment is upgraded, and the code base updated to the next release as per the Release Schedule. So, for example, in May, you will receive a preview of the June release of your app.</p>	<p>The Sandbox App, similar to the Release Candidate App being the current production release of campusM, runs with your Sandbox Environment to test out new configurations in a separate Sandbox Environment from your Production Environment.</p> <p>The Sandbox Environment is a clone of the production environment code base with your specific sandbox data, configuration and AEK code.</p>
