
How to restart Oracle in a TWO_TASK setup

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local
-

Description

How do you restart Oracle in a TWO_TASK setup, where there's a separate database server?

Resolution

Oracle restart needs to be preceded by aleph_shutdown and followed by aleph_startup. See the article "[Proper way to restart Oracle on an Aleph server](#)" in this regard. As described in that article, in an "All-in-One" setup, Oracle can be restarted using util o/1/2 .

****Restart of Oracle in a TWO_TASK setup is best performed by the DBA or sysadmin.**** But the basic commands which would be entered *on the Oracle server* are shown below. Note: you need to be user oracle to do this.

```
> $ sqlplus / as sysdba
SQL> shutdown immediate

> $ sqlplus / as sysdba
SQL> startup
```
