

Importing PubMed results into RefWorks

How do I import a list of references from PubMed into RefWorks?

Although PubMed does not have a direct export to RefWorks, it's possible to create a file in PubMed that can be imported into RefWorks.

In PubMed, after selecting the references to be imported into RefWorks, select **Send to > Citation manager**.

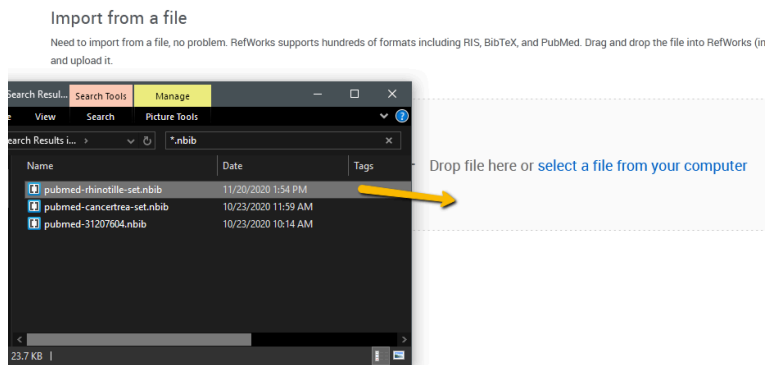

After verifying the information and making a selection from the menu, click **Create File**. The file created will be called 'pubmed-search_name-set.nbib' and end up in the computer's downloads folder.

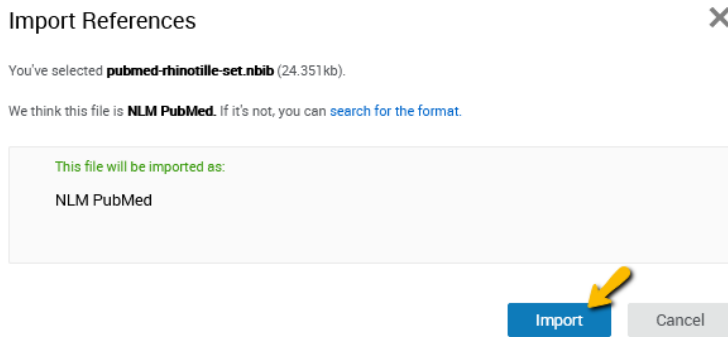

Create a file for external citation management software

Drag the citations.nbib file onto the **Import from a file** area.

Select **Import** to add the references to RefWorks

Imported references will appear in **Last Imported** view of RefWorks.
