

How to ingest more than one METS XML files in a single SIP?

- **Product:** Rosetta
 - **Relevant for Installation Type:** Local
-

Description

How can I ingest 1 or more METS xml files in a single SIP?
What would the folder structure look like?

Resolution

Within the content folder you can have multiple ie.xml files.
The ie.xml files can point to files from the same streams folder.
As an alternative to using a /streams folder, you can add the full http path to the file in the full path in the ie.xml files.

Example:

```
/operational_shared/submissions/sip1/content  
ie3.xml  
ie2.xml  
ie1.xml  
/streams
```
