
print-03: "\${dollar}" appears in output

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

In running print-03, sometimes in the 930 field of the export (where expand_doc_bib_z30 is mapping the z30's to the 930 field), the string "\${dollar}" appears in the output. Example:

```
${dollar}820100702
```

It *should* be simply: \$820100702. (Subfield 8, with a z30_update_date of "20100702".)

Resolution

The "\${dollar}" only appears when opening the record in MarcEdit. Grep-ing on the print-03 output file itself, the "\$8" appears correctly.
