

## Can't update the logic deposit area parameter in General Parameters

- **Product:** Rosetta
  - **Product Version:** 3.0.1. and above
- 

### Description

Attempts to update the Administrative module's Home > General Parameters > logic\_deposit\_area (deposit storage location) parameter results in a "Cannot update the Logic Deposit Area General Parameter" message.

### Resolution

In order to successfully update the logic\_deposit\_area parameter check the following Technical Analyst (TA) folders in all institutions (including Demo) to be sure that all SIPs have been removed:

1. TA > Deposit SIPs
2. TA > Loading SIPs
3. TA> Validation SIPs
4. Rejected SIPs
5. Draft SIPs

Once these folders are empty you should be able to update the logic\_deposit\_area.

### Additional Information

For information on deleting all data, refer to the [Manually Delete All Ingested Rosetta Data](#) article.
