

Restarts to make tab_attr_sub_library change take effect

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

We had to make a change to the xxx50/tab/tab_attr_sub_library. Do we need to restart any services to get the change to take effect? e.g. pc_server, or close and reopen circ client, or ... ?

Resolution

You definitely need to restart the pc_server. The client shouldn't need to be restarted. {The only changes on the server which require client restart are changes to the ./form_eng or ./pc_tab/catalog directories (which generate the html.pck and pc_cat.pck files). Those require restart of the client in order for them to be loaded to the pc.) }.
