

## Country display in letters

- **Product:** Alma
- 

### Description

In several letters there is a tag "country\_display". This is always empty and never showing the name of the country. Isn't it functional?

### Resolution

To see it in the letter, the tag must be added to senderReceiver.xsl as follows:

```
<tr><td><xsl:value-of select="user_address_list/user_address/country_display"/></td></tr>
```
