

## Create a new search tab that opens a different WebVoyage skin

- **Product:** Voyager
  - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
- 

### Question

How to create a new search tab that opens a different WebVoyage skin?

### Answer

1. Create a new skin (see [Creating new skins in WebVoyage](#)). Example skin name: newTab
2. In current skin, follow steps in [WebVoyage Architecture Config.pdf](#) document, "How Do I Add A New Search Tab?"
3. At Step 4 ("Bind the new tab to an action ..."), set the variable value to the URL with the new skin.  
Example: `http://<url:port>/vwebv/searchBasic?sk=newTab`

Result: New tab created; when user clicks tab, the interface opens the newTab skin.

### Additional Information

---

#### Note

Voyager Support has a limited ability to assist with WebVoyage customizations. Please see: [What WebVoyage customizations are supported?](#)
