

Publishing electronic collections results in all members published as deleted

- **Product:** Alma
-

Description

We publish a set of electronic collections. In the report we see that all members of the set were published as deleted although the collections are all activated. What is the issue?

Resolution

You published a set of electronic collections. Those six collections have either no BIB records or suppressed BIB records, so there is no BIB information to publish.

If you want to publish the titles contained in those collections, create a set of electronic titles instead (by doing an advanced search for electronic titles, with parameter electronic collection name = ...).
