

## How do we activate Self Check (SIP2) for Voyager?

- **Product:** Voyager
  - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
- 

### Question

How does Voyager integrate with Self Check kiosks, RFID gates, and other SIP2 enabled systems?

### Answer

Voyager implements 3M SIP2 protocol through an extension module known as "Self Check."

Self Check is not part of the standard Voyager implementation. To initiate the process of activating Self Check, please open a Case with Voyager Support who will work with your account manager to generate a quote, and initiate implementation.

---

#### Note

There is also a "Circulation Self Check" functionality that is part of the Voyager Circulation module. It does not require separate licensing, and does not use SIP2. For more information see: [What is Voyager Circulation Self Check?](#)
