## Source metadata identifiers in Rosetta version 6

- **Product:** Rosetta
  - **Product Version:** 6
  - **Relevant for Installation Type:** Local
- 

### Issue description

In Rosetta version 6 the **sourceMD ID** was changed to comply with METS XSD requirements for type Mets ID Type (DPS-18379).

**SourceMD ID** returned to **getMD webservice** now includes only generic text identification of the metadata object and does not include MID - numeric identifier of the metadata record. The sourceMD ID returned to getMD webservice looks like this:

```
<mets:sourceMD ID="ie-amd-source-MARC-1">
```

---

### Planned fix

In Rosetta version 6.1. the **dmdSec / amdSec / sourceMD / structMap** elements IDs in the getMD response were enriched with an MID in the following way: '{current id}-MID-{MID}'

Example:

```
'mets:dmdSec ID="ie-dmd-MID-1064"'
```
