## Analytics Evidence AGSA10 - Display Defaults - Suppressed vs Repeat Columns

Created By: Igelu-Eluna Analytics  
Created on: 3/18/2019

Use Case: This came out of the ELUNA 2017 conference.

Ex Libris has the default column formatting choice set to Suppressed and the user community would prefer the default be set to Repeat.

When users create a report, they need to manually set every column from suppressed to repeat.

Instead of going through this process with every single report, can the default be changed from Suppressed to Repeat?

---

Ex Libris Response at ELUNA 2018:

Ex Libris is willing to change this default but if users are unhappy about the change they will place the responsibility on the Analytics WG.

The Analytics WG is okay with this.

status: in process  
priority: high  
subject area: general
