

Analytics Evidence CN9 - Copy Quantity Reporting

Created By: Igelu-Eluna Analytics
Created on: 3/19/2019

status: open
priority: medium
subject area: physical items
consortia; resource management

Use Case:

In order to support consortial collection development (e.g., weeding, shared print programs) and resource sharing, consortia need the ability to view number of copies held and their item policy across a consortium.

For example, before Institution A withdraws a book or journal run, it should be able to generate a report to see if Institutions B, C, etc. also have copies and if they circulate.
