

Analytics Evidence PS1 - Extend Content for PNX and Publishing Reports

Created By: Igelu-Eluna Analytics
Created on: 3/19/2019

This would have benefits to both Support and customers.

It would allow customers to do more self service troubleshooting for Primo publishing jobs.

status: open

priority: high

subject area: pnx records; pipes

Use Cases:

- PNX content. Users would like to be able to check specific fields which are being indexed to be able to resolve a mismatch between source records and Primo
- Where multiple SCOPE/VIEWS are used there is no way of checking what is being published or not published under each scope
- Users would like to be able to generate list(s) and count(s) of unique ORCID IDs for linking; unique ORCID IDs for linking and associated PNX records where number of PNX records containing this ORCID ID is > 1
- Users would like to be able to list PNX records with specific local link field (lIn44) and show/count how many occurrences of that local link there is in one PNX record
