
How to find out if Voyager WebAdmin is running

- **Product:** Voyager
 - **Product Version:** 7
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Question

How to find out if WebAdmin is running?

Answer

1. SSH to server as root or voyager
2. Run the command: `ps -ef | grep webadmind`
3. Observe a response similar to the following:

```
voyager 22328      1  0 02:31 ?                00:00:00 /m1/voyager/bin/2009.2.1/webadmind -f2
```

4. If there is no output, it means that WebAdmin is not running

Additional Information

See this [Knowledge Center Article](#) for instructions on restarting WebAdmin.
