
What is the Voyager Global Data Change "Update Location" configuration setting

- **Product:** Voyager
 - **Product Version:** 8
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Question

I am submitting a Data Change Job in Global Data Change and see the "Update Location" configuration drop-down. What does this selection do?

Answer

- The Location selected in the "Update Location" drop-down will be recorded in the Location field in Voyager's BIB_HISTORY table.
- That Location is displayed in the Cataloging Location column in the *History tab of the Cataloging Client*.
- It does *not* change the Location in the MFHD.

Additional Information

See the [Global Data Change User's Guide](#), Chapter 5, for more information¹

¹**Note** that versions of the *Global Data Change User's Guide* previous to version 10.2 fail to mention that this drop-down is activated for *Suppress and Unsuppress* consequence data change jobs. In the 10.2 version of the User's Guide, this is rectified (as per "*Updates to This Guide*"):

Otherwise when one of the rules you select has a Suppress/Suppress All or Unsuppress/Unsuppress All consequence selected, the Submit Data Change Job dialog box displays the following additional option:

- *Update Location*

The functionality of GDC did not change, it was simply an omission in the documentation.
