

How to get the Arial Unicode MS font for Voyager

- **Product:** Voyager
 - **Product Version:** 8
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Question

How to obtain the Arial Unicode MS font?

Answer

If you require the ARIALUNI.TTF file, please open a ticket with [Voyager Support](#). Voyager Support can provide you with a personal download link for the Arial Unicode font package.

A second option, which is: Google has worked with a font producer to create the Noto Font series. These are open fonts, available for download at: <https://www.google.com/get/noto/>. Note that use of this font series falls outside the scope of Support. The Noto Font series link has been provided for informational purposes.

Additional Information

The ARIALUNI.TTF file (the Arial Unicode MS font) needs to be in the PC's `./Windows/Fonts` directory. It is not included in any version of Windows. It needs to be imported. If you have it in your Windows 7 `./Windows/Fonts` directory, you can copy it from there to your Windows 10 `./Windows/Fonts` directory.

For licensing information see the EULA file "TrueType core fonts end user license info.txt" in `/GUI/Fonts`

See also this web page which describes the core fonts which formerly shipped with Windows: <http://www.microsoft.com/typography/fontpack/eula.htm>
