

SUSHI harvesting from JUSP

Description

Following the move to a new server, it looks like there is a slight change needed to the endpoint that you need to point your SUSHI harvesting tools at if you gather data from JUSP into your 3rd party software such as Alma or 360 COUNTER or similar.

The old address <http://jusp.jisc.ac.uk/sushiservice/r4/> isn't returning results properly so please update your software settings to point at:

<https://jusp.jisc.ac.uk/sushiservice/r4/>
