
OPAC: Display Icons Based on Location

Created By: Andy Taylor

[This article was copied from the Voyager Wiki.]

You can use different icons for search results based on location rather than bib format. For example, we wanted to use a different icon for our ebooks but the bib format is not unique. Our library's ebooks have a location of "Electronic Books" so we can use javascript to change the icon based on that.

First, upload your new icon into *ui/YOURSKIN/images/bibFormat/*

Second, add these lines to *ui/YOURSKIN/xsl/pageTools/frameWork.xsl* above the *</head>* tag

```
<script type="text/javascript" src="http://ajax.googleapis.com/ajax/libs/jquery/1.3.2/jquery.min.js"/>
<script type="text/javascript" src="{${jscript-loc}local.js"/>
```

The first line includes the jquery library that is hosted by google. Create *ui/YOURSKIN/jscripsts/local.js* and include the following

```
function setEbookIcons() {
    $("div.line5Link:contains('Electronic Book')")
        .parent().parent()
        .siblings(".resultListIcon")
        .children("img").attr("src", "ui/YOURSKIN/images/bibFormat/icon_www.
gif");
}

$(document).ready(function() {
    setEbookIcons();
});
```

Simply change 'Electronic Book' to the location text you want to match against and 'icon_www.gif' to the name of your icon image.

Note: this works with version 7.1.0 . It may work with other Tomcat OPAC versions if the markup hasn't changed but I haven't tested.
