

## System Administration: Perl Scripts and MARC Utilities

Created By: Roy Zimmer  
Created on: 5/15/2019

[This article was copied from the Voyager Wiki.]

Roy Zimmer's web page which contains links to several years worth of his EndUser and ELUNA presentations, many demonstrating the use of Perl scripts with Voyager for automating vendor file loads, locating records with bad leaders, and more. Also a page with links to download various MARC record utilities such as splitmarc, marccedit, etc. Could be like Christmas morning for some Voyager sites!
