
How to delete a WebVoyage Tomcat skin in Voyager

- **Product:** Voyager
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Question

I created a test WebVoyage skin using the util utility, and now want to delete it from the server. How do I do that?

Answer

As the "voyager" user, you need to go to two different locations on the server and use the `rm -r` command to remove your skin directory.

Be careful that you choose the correct directory. You will *not* be prompted for a confirmation of the delete.

The `rm -r` command will remove all files and subfolders inside the directory.

These are the two locations:

```
m1/voyager/xxxdb/tomcat/vxws/context/vxws/ui  
m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui
```
