## Voyager Goba Data Change replace part of a string

- **Product:** Voyager
  - **Product Version:** 8
  - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
- 

### Question

Can I change part of a string in a field using the Replace String With String consequence in Global Data Change (GDC)?

### Answer

Yes. This consequence will replace a specific string that is inside a larger string. For example if you want to change a string like this:

| (upgd41)omn26633970

To a string like this:

| (OCoLC)26633970

You can use these parameters in your GDC Rule Consequence Template:

| Replace string: (upgd41)ocm  
| With string: (OCoLC)

### Additional Information

The "Replace String With String" consequence matches on an exact match.
