

## Batch change of item temporary location flag

- **Product:** Aleph
  - **Product Version:** 20, 21, 22, 23
  - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
- 

### Description

We want to change the "Y" for items in a temporary location to "N" and then rebuild a new list of "Y"s. How can we do this?

### Resolution

You can use the manage-62 ("Update Item Records") Service to change the Temporary/Permanent Location, specifying a value of "Change to Permanent". Note that manage-62 expects the numbers in the input file to be in item-record format, that is: 000123456000010. You can use the ret-adm-01 Service to produce such a file.

Then you can use the ret-adm-01 Service to produce a list of item records whose z30\_temp\_location flag you want to have changed to "Y" and use that as input to the manage-62 Service.
