
\$TMPDIR filling up with ImageMagick files

- **Product:** Rosetta
 - **Product Version:** 6.0
-

Symptoms

Server path `/exlibris/dps/d4_1/tmp` is filling with ImageMagick thumbnail files named like `"magick-XXXXXXX"`.

In some situations, ImageMagick is using environment variable `$TMPDIR` and not the usual `convert_temp` directory (usually `/operational_shared/operational_delivery_shared/convert_temp`)

Solution

- setup a cron job to clean files from `/exlibris/dps/d4_1/tmp` older than x days

OR

- change ImageMagick `policy.xml` file in `/exlibris/product/ImageMagick-6.6.1-10/lib/ImageMagick-6.6.1/config/policy.xml`, un-comment **temporary-path resource** in `<policymap>` to:

```
<policy domain="resource" name="temporary-path" value="/FULL PATH TO  
DESIRED DIRECTORY"/>
```
