## Restore Community Zone linking parameters (remove override of parser)

- **Product:** Alma
- 

### Question

How to restore Community Zone linking parameters for a portfolio? E.g. a local parser parameter, or bkey/jkey, or override URL were created. The CZ information should be restored.

### Answer

One way to achieve this is to delete the portfolio(s), and reactivate from the Community Zone.

Another way is to use the Portfolio Loader. In the PARSER\_PARAMETER column, put the value: null

It is very important to **test in small scale**, and **first on Sandbox**.

### Additional Information

Click here for Online Help regarding "[Adding, Updating, or Removing Portfolio Information in Bulk Using an Excel File](#)".

Click [here](#) for more information on the Portfolio Loader.
