
Configuring parser parameters for O'Reilly electronic collections

- **Product:** Alma
-

Question

How should parser parameters be configured for O'Reilly electronic collections to enable single sign-on to work with EZproxy?

What configuration setting will add the following suffix to the end of the URL?

`&orpq&email=^u`

Answer

Setting the SSO parameter to **yes** will add the `&orpq&email=^u` suffix to the end of the URL and enable single sign-on with EZproxy.

1. Perform an Electronic collection search for the collection
2. From the Row Actions Menu, select Edit Service
3. Click on the Linking tab
4. Set the SSO linking parser parameter to value: yes

Parameter	Value
SSO	yes
