

## Voyager GDC Scan Rule Set with two conditions

- **Product:** Voyager
  - **Product Version:** 9.1
  - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
- 

### Question

How to create a GDC (Global Data Change) scan rule set with two conditions.

### Answer

Create a Scan Rule Set to have *two rules*, each with one condition (as opposed to one rule with two conditions).

This is the supported approach. Having two conditions may not work properly.

Alternatively, use System Administration to create keyword indexes (if necessary) and use GDC > Record Set > Search functionality to do a Builder search for the data. Then use the Builder search to search for the indexes.
