

Metadata Editor cannot be opened

Question

Why is there the error message "Delimiter was not found. Contact the system administrator" when trying to open the Metadata Editor or editing a bib record?

Answer

The issue is due to no value defined for parameter call_number_type.

Go to Alma Configuration > Resources > General > Other Settings and search for call_number_type. There needs to be a numeric value for the default call number type.

For additional information please see "[Configuring Other Settings \(Resource Management\)](#)"
