
Change where the 856 links display in Voyager WebVoyage OPAC

- **Product:** Voyager
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Question

I would like to move where the 856 links display in our Tomcat WebVoyage OPAC record display.

Answer

WebVoyage displays the 856 links in a section of the displaycfg.xml file (or displayHoldings.xml file) that looks like this (note the "3000" display code):

```
<displayTags label="Links:">  
  <displayTag field="3000"/>  
</displayTags>
```

You can move this section to a different location in the file. Make sure you move *all three lines* of the code, and *always* backup your file before editing it and then test thoroughly after saving any changes.

Additional Information

See Chapter 7 ("Display Codes") in the [WebVoyage Architecture Overview and Configuration Models](#) guide.
