
"update_cursor3 z41x" errors

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

You see z41x errors in the pc_server log, such as:

```
update_cursor3 z410  
update_cursor3 z416
```

Resolution

These errors can occur when the \$alephe_tab/library_relation file includes an "ILL" type relation but the ILL library (column 3) shown in the relation doesn't exist. If the library doesn't exist because the library doesn't use the Aleph ILL module, then remove this "ILL" line from the library_relation file.

Or when the ILL base library (column 2) is not an xxx50 ADM library. It *must* be. Correct this line or, if the library doesn't use the Aleph ILL module, delete the line.
