
Get detailed logging from the Primo Extract Log in Voyager

- **Product:** Voyager
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Question

How to get detailed logging from the Primo Extract in Voyager?

Answer

1. In /m1/voyager/xxxdb/sbin, ensure that the Pprimoexp.X is pointing to the corresponding log4j.properties-X file (e.g., Pprimoexp.pub should reference log4j.properties-pub in /m1/voyager/xxxdb/ini)
2. Then, in the log4j.properties-X file, find these lines:

```
# These next 3 lines *must* be here, just like this.  
# The log level INFO may be changed to DEBUG to show more information  
# in the log file. The log level should not be changed to show  
# any less than INFO.  
log4j.logger.com.endinfosys=FATAL  
log4j.logger.com.endinfosys.voyager.extract.Extract=INFO, CONSOLE, LOGFILE  
log4j.logger.com.endinfosys.voyager.primo.PrimoExp=INFO, CONSOLE, LOGFILE
```

3. And add this line:

```
log4j.logger.com.endinfosys.voyager.extract.ExtractBibs=DEBUG, CONSOLE, LOGFILE
```
