
How to add or remove languages from the Voice search assistant drop down menu?

- **Product:** Primo
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

With Voice Search Assistant, languages are correlated to the same languages that are defined in the display languages. Meaning it support voice search in the same languages configured for your view. Any language that are added to the Primo languages in the views via mapping table, voice search languages will be available accordingly.

Display languages meaning, the languages that are available in the "Default interface language" from the Primo BO. Any languages added to the Interface Language will make the voice search language available accordingly.

Here you can find some information about "[Which Back Office configurations control language in Primo?](#)"

From the mapping table, "voice search languages" table provides the list of languages that voice search supports. Primo is using voice search API supported languages and mapped it to the Primo languages.

Here is the list of languages that are supported.
