
Weather

The Weather product integration displays the weather forecast for that day and the next two days on the home page, with an option to link to a weather related external link.

Vendors

The Weather product integration is supported currently by the following vendors:

- BBC vendor
- National Weather Service (weather.org) - available in the US only

User Experience

The following section describes information relating to the user experience for the Weather product integration.

User Activities

- The user can see the weather forecast for that day and the next two days.
- The user can select the tile and open an external weather website.

Authentication

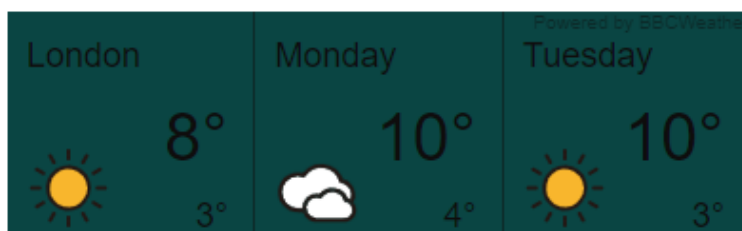

No authentication required. The Weather product integration can be used by a guest profile.

Offline Support

No offline support is available.

Screenshots

The following is an overview of the Weather product integration user interface for a reference when configuring it:

Live Tile

We recommend a 3*1 tile size (3 width, 1 height).

Configuration

The following section describes configurations for the Weather product integration.
