

Acq-06: "Error: Unable to read Z76 record"

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

Running the job "Renew Order Encumbrances for Monographs/Serials and Standing Orders (acq-06-a/b)" Order Type=Monograph results in error messages such as the following:

```
Error: Unable to read Z76 record - KORFD-2020 .
```

Resolution

Though there's no KORFD-2020 z76 (budget) record, there *are* z601 (budget transaction) records which have "KORFD-2020" as the z601_rec_key (the budget). These are what the acq-06 Service is reading. And these z601 records have a z601_rec_key_3's (order records) which do exist (-- and are connected to actual xxx50 ADM records).

```
SQL> select z601_rec_key_3 from z601 where z601_rec_key like 'KORFD-2020%';
```

In this case, "KORFD-2020" was used when KORFD4-2020 should have been used. The z601 budget transactions which had "KORFD-2020" needed to be corrected to "KORFD4-2020".
