

Remove WebVoyage footer tabs (buttons)

- **Product:** Voyager
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Question

Remove one or more footer "tabs" (sometimes called "buttons" or "links") from WebVoyage OPAC user interface.

Answer

There are two different options for making such a change. The first is granular and just removes one or more of the tabs. The second removes the entire row of tabs.

1. Go to `/m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui/[skin]/xsl/userTextConfigs/pageProperties.xml` and in the "Footer Tab Display Order" section, comment out the tab or tabs you do not want to display in the WebVoyage footer.

For example, the following change will limit the display to only the Search and the Help tabs:

```
<!-- ## Footer Tab Display Order ## -->
<footerTabDisplayOrder>
  <tab name="page.footer.buttons.search.button">
    <highlight
      pages="
        page.searchBasic
        page.searchAdvanced
        page.searchSubject
        page.searchAuthor
        page.searchCourseReserveData
      ">
  </tab>
<!--
  <tab name="page.footer.buttons.mySearches.button">
  <highlight
    pages="
      page.mySearches
    ">
  </tab>
  <tab name="page.footer.buttons.myList.button">
  <highlight
    pages="
      page.myList
    ">
  </tab>
```

```
<tab name="page.footer.buttons.myAccount.button">
  <highlight
    pages="
      page.myAccount
      page.myAccount.personalInfo
      page.myAccount.editPreferences
      page.myAccount.changePin
    ">
</tab>
-->
<tab name="page.footer.buttons.help.button" clickOpensNewWindow="true" />
</footerTabDisplayOrder>
```

2. To stop all of the tabs from displaying (e.g., *the entire row*) simply make the following change to the header.css file:

```
#footerTabs .navbar
{
display: none;
margin: 0px;
padding: 0px 0px;
}
```
