
Why does the Add members to Set job fail immediately?

- **Product:** Alma
-

Question

I am trying to create a set based on an Excel file of PO Line Reference numbers, why is the Add Members to Set job completing as Failed?

< Job Report

Add Members to Set	
Failed	Process ID
Failed	Finished on 08/21/2020 08:10:56 AM
Failed	Status
Records processed	Started on 08/21/2020 08:10:51 AM
	Total run time 4 Seconds
	Status date 08/21/2020 08:10:56 AM
	Records with exceptions

Alerts

The job completed with errors. For more information view the report details (or contact Support using the process ID).

Answer

- Please check the file for duplicates using Excel tools. If there are duplicates Alma considers the file corrupt.
- If the job still fails it could be that the data with Alma is duplicated, meaning there are multiple PO-Lines in Alma with the same reference number. In this case, you can open a case to support and we can locate the duplicates in the database.
