

Rosetta Known Issues

Rosetta releases contain features that connect to a complex network of entities. Sometimes bugs/issues are reported by customers due to the various system enhancements. Known Issues present Rosetta users with an indication of the issues/bugs that currently exist and have the following criteria:

- Defined as high priority by submitters of the case
- Identified as bugs
- Have a fix date that was communicated to the customer

Each known issue has a target release for the fix.

Rosetta Known Issues

Key	Customer Reference	Summary	Target Release
DPS-21519	06990049	Critical vulnerability - CVE-2023-50164 - STRUTS Upgrade to 2.5.33	HF 8.0.0.2
DPS-21450	06563078	<p>Ingests including complex data as CDATA elements or/and special characters were often not ingested / saved / exported correctly as they were originally defined.</p> <p>When the new general parameter "LOAD_SAVE_CDATA_BOOKMARKS" under the "general" module is set to true, the XmlBeans will utilize XmlOptions and parse elements and CDATA elements in a consistent manner.</p> <p>This Parameter is false by default so as not to change existing behaviour unless required.</p>	HF 8.0.0.2
