

Control subfield order in Voyager Global Data Change

- **Product:** Voyager
 - **Product Version:** 10.2 and earlier
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Question

When adding a subfield using Global Data Change (GDC) is there a way to control placement (order) of that subfield?

Answer

- Prior to Voyager version 10.3, the answer is "No." New subfields are placed at the end of the field.
 - With version 10.3, Voyager Global Data Change provides a mechanism for controlling the order of added subfields. See Chapter 3, "Add MARC Subfield", in the Global Data Change User's Guide.
