
Changing the Voyager Tomcat OPAC search results page icons

- **Product:** Voyager
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Question

How do we add or make changes to the search results page icons (graphics) that display in the titles list.

Answer

- 1) Place an image inside of the images folder in /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui/en_US/ to correspond to whatever you wish to create. There are no restrictions on this image except for the dimensions.
- 2) Look for pageProperties.xml in xsl/contentLayout, and find this section of code within the file and modify it as is appropriate:

```
<!-- ## This section defines the text and the icon to use (for results list icons) for
bibFormat ## -->
< bibFormats>
< bibFormat type="aa" icon="icon_book.gif">Book</bibFormat>
< bibFormat type="ab" icon="icon_serial.gif">Periodical</bibFormat>
< bibFormat type="ac" icon="icon_pamphlet.gif">Book</bibFormat>
< bibFormat type="ad" icon="icon_book.gif">Book</bibFormat>
< bibFormat type="am" icon="icon_book.gif">Book</bibFormat>
....etc.
```

The two-digit format type (e.g., "am") is what's stored in the Bib Leader "Type of Record" and "Bibliographic Level" (character positions 06 and 07); the icon is the image file stored within the images folder; and the actual text of the tag is what will display on mouse over.

For more information see the [WebVoyage Architecture Overview and Configuration Models](#), Chapter 36.
