

## Extracted significant properties - UI search

- **Product:** Rosetta
- **Product Version:** 6.3 +

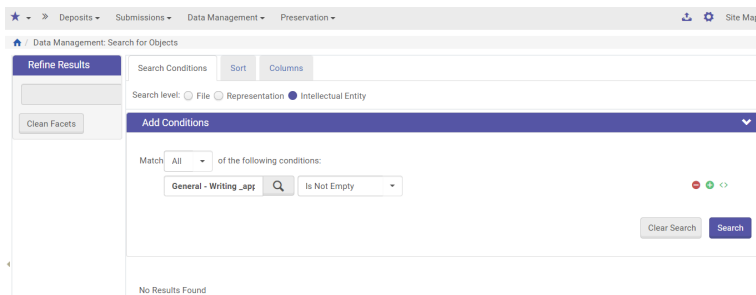

### Symptoms

Some significant properties extracted by technical metadata extractor plugin cannot be searched from Rosetta 'Search for Objects' screen.

- The IE.xml includes significant property record:

```
<record>
<key id="significantPropertiesType">mediainfo.track.General.Writing_application</key>
<key id="significantPropertiesValue">J2K MXF Wrapper Based on MXFLib 1.0.1</key>
</record>
```

- The DNX field is not available in the "Select a Search Field" or the search returns no results.

### Solution

**UIlabels** code table should not map one label to multiple DNX significant property values. Update it to unique values

Value	Label
FILE.significantProperties.significantPropertiesType.mediainfo.track.General.Writing_application	mediainfo - General - Writing _application (significant Properties)
FILE.significantProperties.significantPropertiesType.mediainfo.track.General.Writing_application	General - Writing _application (significant Properties)
