

Configuring Display Label for Local Fields

Created By: Joan Kolarik

Q: Is there a way to edit the display label for local fields in the new asset page? I was able to add a local field to the display, but it displays with the label "Local Field 1", and I can't find a way to change that.

A: With the local field already defined and labeled in the admin, from the Esploro admin

1. add local label text to the Researchers > Researcher Profiles > Labels > Esploro Portal Fields Labels
 2. go to Discovery & Dissemination > Research Portal Configuration > Asset Page > details line > ... menu > Configure > Details section > Add Field > add your local field > Save Button (the field will now be labeled as Local Fields, or whatever you called this section -- I couldn't see how to change this without the Save + following step)
 3. Configure that new line again > in the Label dropdown at the top, select the label assigned in step 1 > Save
 4. Save (move line first, of course, if needed)
