
How do headings get on the Global Headings Change Queue (GHCQ)?

- **Product:** Voyager
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Question

How do headings get into the Global Headings Change Queue?

Answer

Headings are triggered to go into the GHCQ when:

- heading in an authority record is updated in the catalog client
- new authority record is created in the catalog client
- new authority record is imported into the catalog client
- new or updated authority records are bulk loaded by a server job (for example an authority vendor can supply records on a monthly or quarterly basis)

Any of these actions will populate the [HEADING_CHANGE_QUEUE table](#).
