

Two selfcheck machines for one circulation desk

- **Product:** Alma
-

Description

We would like to run two selfcheck machines at one circulation desk.

As we can only associate one self-check profile with a circulation desk, can we run two self check machines off one integration profile, or do we need to set up an integration profile for each machine and create an additional circ desk?

Resolution

You can run two machines for the same integration profile.

Connect this profile to your circulation desk as usual, and run the same certificate on each machine.
